

BRIAN HITCHIN

Seattle, WA | +1 (619) 822-7584 | brianleehitchin@gmail.com

SUMMARY

Full-stack engineer with ~2 years of experience building production platforms and applied-AI features across React, Java/Spring, and cloud. Ships systems that serve thousands of users and cut operational overhead through automation, thoughtful backend design, and machine learning.

TECHNICAL SKILLS

Languages & Frameworks: Java, JavaScript, React, Redux, Node.js, Express, Python, Flask, HTML/CSS

Data: SQL Server (SSMS), PostgreSQL, MySQL, MongoDB (NoSQL), Snowflake, Azure Data Explorer, JDBC, JPA, Hibernate

AI / ML: LLM integration, prompt engineering, applied ML (contextual bandits)

Cloud & DevOps: Azure, AWS, Azure DevOps (ADO), CI/CD, Git

Testing: JUnit, Mockito

Tools & IDEs: IntelliJ IDEA, VS Code, Postman

Practices: OOP, SDLC, design patterns, REST APIs, API documentation, Agile & Scrum

Languages: Korean (professional working proficiency)

PROFESSIONAL EXPERIENCE

T-Mobile — Full-Stack Developer (Contract)*Seattle, WA · Oct 2024 – Present*

- Built a full-stack access-control platform (React, Java/Spring Boot, SQL Server, MUI) managing 5,000+ users across multiple internal applications; optimized backend queries and caching, reducing access-related operational overhead by ~60%.
- Designed an AI-assisted access-recommendation engine that pairs rule-based policy with a contextual-bandit model learning from admin grant/deny decisions, cutting mean ticket-resolution time by ~90%.
- Developed a centralized JWT authentication gateway validating Entra-issued tokens across all services; processed 10M+ API calls with zero authentication incidents.
- Built an extensible query-execution platform integrating heterogeneous data sources (SQL Server, PostgreSQL, MongoDB), enabling user-defined queries, automated execution flows, and API exposure for downstream integration.
- Added an LLM-powered query optimizer to the platform (Azure Data Explorer, Snowflake, SQL Server) that automatically rewrites user queries, reducing API response times by ~30%.
- Introduced JUnit/Mockito unit testing, improving refactor safety and code-review velocity.

Cognixia — Full-Stack Java Developer (JUMP Program)*Remote · Oct 2023 – Jun 2024*

- Developed Spring Boot REST APIs (Spring Security, JPA/Hibernate) and authored unit tests with Mockito.
- Implemented DAO and JDBC data-access patterns, following SDLC and design-pattern best practices.
- Worked backlog to delivery in Agile sprints, producing concise ICDs / API documentation and integration guidance.

Scale AI — Computer Science AI Trainer (Part-time)*Remote · May 2023 – Jan 2025*

- Reviewed and scored software-engineering solutions and explanations to improve LLM outputs; maintained rubric consistency and collaborated asynchronously.

SELECTED PROJECTS

Smack — Real-Time Chat

- Socket-driven group chat with members, invitations, and persistent storage; designed backend REST routes and documentation to improve clarity and team velocity.

EDUCATION & CERTIFICATIONS

App Academy (Oct 2022 – May 2023) — Full-Stack Software Engineering (Python & JavaScript, TDD, algorithms, SPA)

University of California, Berkeley (Jun 2013 – May 2017) — B.A., Neuroscience

AWS Cloud Practitioner (CLF-C01)

Meta Front-End Developer Professional Certificate
